

Introducing Tosca's New Seafood RPC

There's now a sustainable and cost-effective option for shipping seafood. By making the switch to Reusable Plastic Containers, you'll drive significant cost savings and rid your supply chain of single-use EPS foam forever.

Game Changers

Eliminate EPS foam from your supply chain with the more sustainable packaging solution for seafood.

RPCs preserve cold temperatures to maintain seafood's quality throughout the supply chain.

Foam can be up to 3x more expensive than RPCs. Making the switch can save big on packaging costs.

Superior Design

Engineered for durability, RPCs withstand weight and water, easily handling the rigors of the supply chain.

Fluid retention channels in the RPC capture liquid, reducing the risk of cross-contamination from allergens.

Unlike foam, RPCs are collapsible, saving valuable space in the warehouse.

The **superior alternative** for shipping seafood.

Tosca's Reusable Plastic Containers (RPCs) are a game-changer for your seafood supply chain. When you switch to Tosca RPCs, you reduce the amount of foam going to our landfills and oceans all while reducing packaging costs for your business.
